

DeFiBank: Stable, Instant, Low-Fee Payments on Hedera

A one-pager pitch for hackathons and investor boards. Optimized for clarity, traction, and a compelling live demo.

Executive Summary

- Problem: Cross-border payments in and across African markets are slow, expensive, and opaque.
- Solution: DeFiBank is a Hedera-powered stablecoin banking layer enabling instant, low-fee payments, escrow, and savings. Users send and receive value like a message.
- Why now: Stablecoins are the fastest-growing crypto use-case; Hedera brings finality, predictable low fees, and sustainability to mainstream payments.
- Traction: Running on Hedera Testnet with live features (escrow, transfers, savings pots, orbital AMM demo). Designed for mobile and low bandwidth.
- Ask: Seeking funding and partners to onboard fiat on/off-ramp providers, expand to 5 priority corridors, and complete compliance integrations.

Problem

- Remittances and merchant payments can take days with 4–8% fees and uncertain FX.
- SMEs struggle with working capital and settlement risk; consumers lack safe cross-border options.
- Existing solutions are fragmented; most wallets don't speak to each other; chargebacks and fraud remain high.

Solution

DeFiBank is a stablecoin banking experience with:

- Protected Transfers (Escrow): Release on delivery or milestone completion; dispute minimization.
- Savings Pots: Goal-based saving with social accountability and transparent rules.
- Group Payments: Split bills, collect dues, pooled remittances.
- Exchange/AMM: Swap stable tokens with transparent routing (Orbital AMM demo).
- QR Pay + Profiles: Frictionless local payments and identity-anchored transfers.

Outcomes:

- Instant settlement, near-zero fees
- Reduced fraud via escrow and programmable rules
- Cross-border transparency with traceable on-chain receipts

Why Hedera (Moat)

- Finality in seconds, consistently low fees, and energy efficiency
- Account abstraction-like UX via custodial or smart account patterns
- Native token service simplifies stablecoin minting and transfers

Architecture (High-Level)

Protected Transfer (Escrow) Flow

Differentiation

Capability	DeFiBank	Traditional FinTech	Crypto Wallets
Instant settlement	✓	✗	⚠ varies
Escrow / Protected transfer	✓	⚠ limited	⚠ uncommon
Transparent fees	✓	✗	⚠
Cross-border focus	✓	⚠ limited	⚠ user-managed
Low energy / predictable fees	✓	✗	⚠ varies

Market & GTM

- Beachhead: SME B2B payments and freelancer payouts in 5 priority corridors
 - Expansion: Merchant QR payments, e-commerce escrow, diaspora remittances
 - GTM Partnerships with on/off-ramps, marketplaces, and payment aggregators; community ambassadors for corridor activation
-

Business Model

- Interchange/Spread: Small fee on swaps and FX
 - Escrow/Merchant Fees: Tiered SaaS or per-use micro-fees
 - Premium APIs: White-label escrow and payouts for marketplaces
-

Traction & Status

- Live Testnet app with: Escrow, Savings Pots, Group Payments, Exchange AMM demo), QR Pay, Profile
 - Contracts deployed to Hedera Testnet (see README for HashScan links)
 - Robust UX Hydration-safe, cross-browser, mobile-first
-

Milestone 1 & 2 in the Next 1 to 3 Months

1. Security audits, Compliance requirements /KYC/AML needs assessment where required and custom options dev study.
 - 2 . Mainnet deployment, and thereafter beta launch to full market public use.
-

The Ask

- Funding: \$100k pre-seed to launch in 5 corridors and secure registration licenses where needed plus partnerships
- Intros: On/off-ramp providers, payment aggregators, marketplace platforms
- Pilots: Marketplaces and SME networks for escrow-protected payments

Use of Funds

- 40% Compliance, security, audits, promotion and marketing

- 35% GTM, corridor activation, partner integrations
 - 25% Engineering and ops
-
